Cleaning the Hood Filters onsite?

Attention Facility Manager:

EPA's "Clean Water Act" has made it impossible for us to service your grease filters onsite and in the parking lots.

We want to educate your location on the risks that are involved with cleaning filters onsite.

Besides the most common outcome of a large **costly fine**, there is also a chance of a **1 year jail term** based off of the severity of the offence.

Here at FilterShine, our goal is to insure that we are not only **protecting** our customers from exposure and liabilities like these, but also we too are committed to our employees and insuring that they are not being put at risk of **breaking a law**

This is why we offer our Grease Filter Exchange Services. Not only will your staff not have to service your filters in-house any longer, the service itself will save you enough money in labor where it **pays for itself!**

We thank you for your time and concern in this matter, and also look forward to having a conversation about our services. Please feel free to contact us at **1-855-483-0199** today.

Stephen Kassaras

FilterShine New England, General Manager/Partner

Hidden risks of cleaning filters in your deep sinks.

- Clogged drains
- Costly line jetting services
- Local fines due to pH levels of your waste
- Chemical burns for employees

Did you know that up to 70% of the grease going down your drains are from cleaning your hood filters in your sinks?

- Lessen your chemical costs
- Lessen your grease trap service costs
- Lessen your employee cost

Increase employee morale while minimizing injury exposures.

- No more climbing on cooking equipment
- No more cutting your fingers on the baffles
- Employees are happier

Did you know that our services are a tax write off?

- Paying employees to clean your filters, you have to pay the payroll tax
- Using our service is a tax deductible expense
